

LintPDF synthetic test document

Contains intentionally good and broken print/PDF elements.

This PDF is designed for manual testing against LintPDF. Each following page pairs a PASS panel and a FAIL panel. Document-level rules cannot all be isolated in a single file, but this file includes many likely triggers: RGB objects, spot-like colors, low-res images, JPEG artifacts, transparency, alpha PNGs, barcodes with quiet-zone issues, nutrition facts pass/fail panels, form fields, annotations, JavaScript, and mixed page geometry.

PASS panel

FAIL panel

- Fonts: real vs simulated styles, live text vs tiny text
- Color: RGB, CMYK, unsafe barcode colors, overprint-risk visuals
- Images: high-res, low-res, JPEG artifacts, transparent PNG
- Barcodes: vector EAN-13 good; broken raster barcode; QR good/bad
- Regulatory: Nutrition Facts good/bad; EU ingredient/allergen text
- PDF features: form fields, annotation/link, JavaScript action

Geometry and page-box style issues

Synthetic preflight test PDF

PASS

geometry.bleed_insufficient, geometry.content_outside_trim

All critical content stays inside the simulated trim area. Background extends farther to imply bleed.

FAIL

geometry.content_outside_trim, geometry.trim_box_missing

This text and rule intentionally cross the trim boundary. A real preflight engine should flag content outside trim / insufficient bleed logic.

OUTSIDE TRIM

Fonts and simulated styles

Synthetic preflight test PDF

PASS

font.not_embedded, font.simulated_bold_italic

Embedded true styles:

Regular embedded text 123456789

True bold embedded text 123456789

True italic embedded text 123456789

Monospace glyph coverage ABC xyz 0123

FAIL

font.simulated_bold_italic, font.type3_detected

Intentionally simulated styles:

Simulated italic by skew transform

Simulated bold by overprinting twice

DTPE3

Blocky vector word above is included to resemble a Type3 / non-smooth font trigger.

Color spaces, TAC, and overprint-risk visuals

Synthetic preflight test PDF

PASS

color.rgb_in_cmyk_workflow, color.ink_coverage_exceeded

Top patch: process CMYK only. Bottom patch: safe rich black build (TAC well below 400%).

FAIL

color.rgb_in_cmyk_workflow, color.overprint_conflict, color.ink_cove

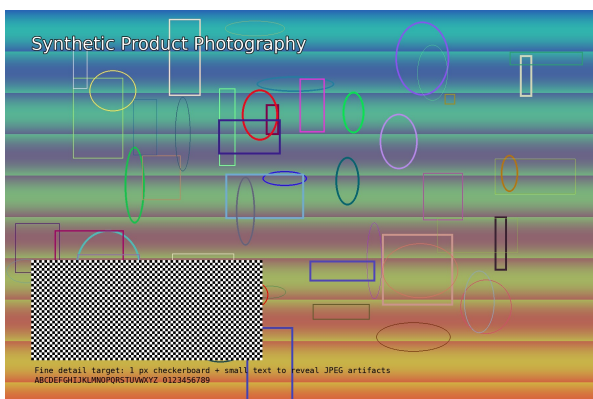

color. Bottom
back and the
mimics

Images, transparency, and alpha

Synthetic preflight test PDF

PASS

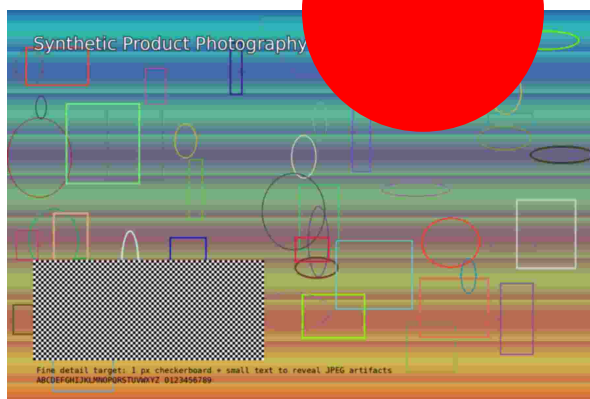

image.low_resolution, image.jpeg_artifacts

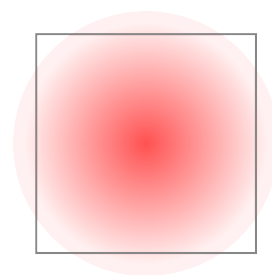

High-resolution photographic asset placed at moderate size. Opaque only.

FAIL

image.low_resolution, image.jpeg_artifacts, image.alpha_transpare

Low-res / artifact-heavy image above. Semi-transparent red circle and transparent PNG below intentionally introduce PDF transparency and alpha.

Barcode checks: good and broken

Synthetic preflight test PDF

PASS

barcode.detected, barcode.quiet_zone_insufficient

Vector EAN-13 with clean contrast and human-readable digits.

QR with normal quiet zone.

FAIL

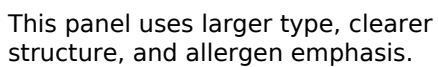

barcode.low_dpi, barcode.non_compliant_colors, barcode.decode_failed

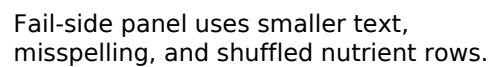

Rasterized, blurred, cyan barcode with contaminated quiet zone. QR below has weak contrast and too little border.

Synthetic preflight test PDF

```
ai.fda.nutrition_panel, ai.fda.font_sizes, ai.eu_fir.allergen_empha
```

ai.fda.nutrient_order, ai.fda.font_sizes, ai.eu_fir.x_height

Interactive PDF features

Synthetic preflight test PDF

PASS

annotation.present, form.field

These form fields and link annotations are intentionally included. Many print-locked

Sample checkbox

External docs link annotation

FAIL

compliance.javascript_present, forms, annotations

This page will also receive a document-

Another active annotation/link region

Miscellaneous print-stress content

Synthetic preflight test PDF

PASS

live_text, vector

LIVE VECTOR LABEL

Clean live text and vector border intended to stay crisp.

FAIL

tiny_text, registration-like, visual_quality

tiny regulatory text 1
tiny regulatory text 2
tiny regulatory text 3
tiny regulatory text 4
tiny regulatory text 5
tiny regulatory text 6
tiny regulatory text 7
tiny regulatory text 8
tiny regulatory text 9
tiny regulatory text 10
tiny regulatory text 11
tiny regulatory text 12
tiny regulatory text 13
tiny regulatory text 14
tiny regulatory text 15
tiny regulatory text 16
tiny regulatory text 17
tiny regulatory text 18

Very small text and misregistered printer-mark style crosses can help test visual legibility rules.

PASS

summary

Use this file as a mixed synthetic test. Some document-level checks such as encryption or full PDF/X conformance conflicts are not all embedded at once to keep the file easy to open and upload.

FAIL

summary

Post-processing adds JavaScript open action. The final page size of this page intentionally changes in metadata after creation to simulate a geometry mismatch between pages.
